ABSTRACT

A method of locating a potential source of fuel leakage in an aircraft fuel tank including the steps of:

- sealing a vacuum tight cover over the whole seam on the surface of the empty fuel tank where there is a suspected source of fuel leak;
- removing the air between the cover and the surface;
- measuring the vacuum between cover and the surface;
- comparing the measured vacuum with a predetermined acceptable datum vacuum value.

The technique of sealing a vacuum tight cover to a surface is known as "bagging".
